Top Three Reasons
Office 365 Customers Choose Cisco Email Security

Microsoft Office 365 has become the standard productivity platform and an attractive target for attackers.

Combat ransomware, business email compromise (BEC), and phishing with Cisco Email Security for the most effective protection

Detect and block more threats
Take advantage of superior threat intelligence from Cisco Talos, our threat research team. Talos automatically sends intelligence updates every five minutes.

Over **90%** of breaches start with email

Stop URL-based threats before they reach users' inboxes
With broad URL intelligence you can drop emails with risky links automatically or block access to newly infested sites with real-time URL analysis to protect against phishing and BEC.

Automate malware responses to combat ransomware
Save hours of work when files with stealthy malware evade initial detection. Mailbox Auto-Remediation automatically removes the threat to reduce exposure.

Easy integration with Microsoft Office 365
